Reduce your infringements by 60% with Stoneridge's Duo Technology

Stoneridge customers have seen an average drop of 60% on driving infringements thanks to the Duo Technology in its SE5000 Exakt Duo² digital tachograph.

For drivers, keeping on top of the Drivers Hours' Law and Working Time Directive is no mean feat. And not always something that comes at the top of the agenda when they have the road to focus on. Stoneridge recognises this and strives to address the problem with its tachograph's Duo Technology, a handy tool, providing drivers with real time information on their current situation on the tachograph display, including countdowns on drive and rest times, and useful warnings when nearing the driving limits. The tool helps them optimise their time on the road and adapt to any changes in their journey, as well as helping them to stay legal and avoid costly fines.

Moreover, investigation into real driving data shows that these unique Duo screens have been shown to significantly reduce infringements by an average of 60%* across all infringements. This of course helps fleets avoid unnecessary fines and keep their costs down. Less infringements also means they keep their Operator Compliance Risk Score down, helping them to limit how often they are stopped by the authorities for roadside checks. This really does make the SE5000 Exakt Duo² the tachograph for a better, more efficient fleet.

One happy fleet owner, Mark Armstrong of ABH of Mansfield, told us "The tachograph is doing the hard work for the driver but it also helps them to be much more aware and we have seen a fantastic reduction in infringements so it's helping us to keep in line with the law."

For more information on how the SE5000 Exakt Duo² will benefit fleets visit: www.SE5000Exakt.com

*Taken from a sample of real data of 108 drivers, examined over 180 days of similar driving time, using any digital tachograph manufactured prior to April 2012 for 90 days, followed by an SE5000 Rev 7.4 or 7.5 for 90 days.

Note to Editors:

Stoneridge Electronics is a part of Stoneridge Inc., a leading designer and manufacturer of highly engineered electrical and electronic components, modules and systems. Stoneridge has a strong reputation for developing innovative, reliable products including instrument clusters, tachographs, telematics systems and security systems for the automotive industry. Stoneridge Inc. has an annual turnover of over \$659.5 million and just over 4,600 employees; of whom 1,150 work at Stoneridge Electronics.
