Stoneridge to showcase the future of commercial vehicle technology at IAA 2014

Stoneridge has a high reputation for innovation and at this year's IAA looks forward to showing a range of innovative product solutions on offer across the commercial vehicle market. Ranging from instrument clusters to apps, including download solutions, telematics and the brand new digital tachograph, the SE5000 Exakt Duo².

Stoneridge is one of the largest CV instrument cluster manufacturer in Europe, and will be showcasing how it will shape the future of truck driver information systems through our **FCD4**, Fully Configurable Dashboard 4. Visitors will get the chance to demo the future of truck technology through a full display cluster, two rear view displays and an Android tablet working as a central information display. Come along to **hall 16**, stand **A36** to get the full interactive experience.

Operators looking for the most user-friendly tachograph on the market should also make their way to see Stoneridge's recently launched **SE5000 Exakt Duo²**. In addition to the existing benefits such as the "One Minute Rule" and real-time updates and countdowns on drive and rest times, it has a wealth of new features. Fleets will be pleased to see Working Time Directive (WTD) calculations that have been added as a new warning screen in the Duo technology. This will keep drivers more informed, helping to reduce infringements and costly fines.

Commenting on the importance of the IAA, Kent Pålsson, VP Product Management & Marketing, said: "We are excited to return to this year's IAA and look forward to meeting both existing and potential new customers, to showcase our cutting edge technology and help find the best solutions for them, many of which can save both time and money."

Other stand highlights include two free tachograph apps - the **Duo Mobile** app shows real-time updates on Android smartphones, and with the **Tacho Center** app you can wirelessly download digital tachograph data. Fleets will find out more about Stoneridge's flexible tachograph analysis software, **OPTAC3**, and their range of download devices such as the **digiDL** remote download tool and the Bluetooth **Tacho Link** dongle.

A range of **Power Modules & Switches**, **Telematic Systems** and **Sensors & Actuators** will also be on display.

To learn more, visit Stoneridge in **hall 16**, stand **A36** at the IAA.

Note to Editors:

Stoneridge Electronics is a part of Stoneridge Inc., a leading designer and manufacturer of highly engineered electrical and electronic components, modules and systems. Stoneridge has a strong reputation for developing innovative, reliable products including instrument clusters, tachographs, telematics systems and security systems for the automotive industry. Stoneridge Inc. has an annual turnover of over \$659.5 million and just over 4,600 employees; of whom 1,150 work at Stoneridge Electronics.
