

DOWNLOAD TACHOGRAPH DATA FROM ANYWHERE IN THE WORLD.

The digiDL and our pioneering tachograph make the perfect *Duo*.™

Working alongside any digital tachograph with remote download functionality – including the new SE5000 Exakt Duo – the digiDL enables you to remotely download VU and driver data securely using GPRS technology. So now, you can manage tachograph records from all vehicles in your fleet – no matter where they are in the world. The digiDL allows for an automated, centralised data transfer, so you know exactly when and where you will receive your tachograph information. And, because the digiDL removes the need for time-consuming manual downloads, you'll gain more driving time too.

To fit the digiDL and make your fleet more efficient,

HOW IT WORKS

All you have to do is ensure you have a company card placed in a card reader connected to the internet. Then, using GPRS connectivity, vehicles fitted with the digiDL send encrypted tachograph data to your company card at scheduled times. It really is that simple!

10 reasons to fit the digiDL in your fleet:

Securely download tachograph data via GPRS

Scheduled downloads

Choose where data is sent

Remote authentication of company card

1 company card can be linked with up to 300 vehicles

Simple integration with tachograph analysis software (automatic with OPTAC3 software)

Immediate data download whenever it is needed

Removes the need for manual downloads

Works with any digital tachograph with remote download functionality

Helps you manage your fleet more efficiently
