People everywhere are saying great things about the SE5000 Exakt Duo²

The SE5000 Exakt Duo² tachograph from Stoneridge Electronics, boasting its ability to **reduce a fleet's infringements by 60% on average***, has proven to be a remarkable success across Europe. The Duo Technology includes multiple features such as countdowns on drive and rest times, warnings alerting drivers when to take their next rest period and real time ferry and train support, so the driver can easily see for how long they have interrupted their rest period. The Exakt Duo² also includes a simple, intuitive manual entries process with a "Rest until now" function, keeping driver input to a minimum and allowing them to get started with their driving day.

As well as this, the SE5000 Exakt Duo² may be used in conjunction with the Duo Mobile smartphone app, allowing for a second Duo display for easy viewing. The free app, which can be downloaded within seconds from Google Play, is now also compatible with Android **Smart Watches**, allowing the driver to receive vibration alerts on his wrist when nearing the end of his drive time – meaning a driver can keep compliant whilst focussing on the road.

For drivers not familiar with the SE5000 Exakt Duo² there is plenty of support online for the product at www.SE5000Exakt.com. The comprehensive **Training Section** includes a very handy **interactive product simulator**, covering everything from manual entries to doing printouts, giving drivers plenty time to familiarise themselves with the features of the tachograph without being in the vehicle. There are also videos and easy to follow instructions which can be printed out for the drivers to keep in the cab.

Mark Hailwood, Fleet Manager for GBA Services, was just one of many who saw the benefits of the Exakt Duo². He stated, *"The drivers use the countdown feature a lot as it is really useful for avoiding infringements. We have definitely seen a reduction in infringements over the last couple of years thanks to the Duo."*

Paul, a driver, who was also impressed with the tachograph said, *"It's absolutely fab, knocks spots off its predecessors and I prefer it to the competitor's units."*

Stoneridge are proud to have brought the first One Minute Rule tachograph to the market, giving drivers an average of 45 minutes extra driving time per driver per day and now they are helping fleets again by reducing infringements by an average of 60% with Duo Technology.

Fleets can experience the benefits of the SE5000 Exakt Duo² today by calling Stoneridge on 01382 866400 for more information or visit the website at www.SE5000Exakt.com

*Taken from a sample of real data of 108 drivers, examined over 180 days of similar driving time, using any digital tachograph manufactured prior to April 2012 for 90 days, followed by an SE5000 Rev 7.4 or 7.5 for 90 days

Note to Editors:

Stoneridge Electronics is a part of Stoneridge Inc., a leading designer and manufacturer of highly engineered electrical and electronic components, modules and systems. Stoneridge has a strong reputation for developing innovative, reliable products including instrument clusters, tachographs, telematics systems and security systems for the automotive industry. Stoneridge Inc. has an annual turnover of over \$659.5 million and just over 4,600 employees; of whom 1,150 work at Stoneridge Electronics.
